Biography

Ph.D. student at the Visual & General Intelligence (VGI) Lab., Korea University, supervised by Prof. Gyeong-Moon Park. Current research focus lies in Vision-Language-Action (VLA) models, Vision-Language-Navigation (VLN) models, and multimodal generative models.

Recipient of the [Presidential Science Scholarship](#) funded by the Ministry of Science and ICT.

Prior to academia, professional experience includes over three years as an AI Researcher at Klleon AI Research. Key contributions involved photo-realistic 3D human generation, enabling lifelike avatar movements and lip-sync. Holds both M.S. and B.E. degrees from DGIST, with a strong foundation in Deep Learning and Signal Processing, advised by Prof. Jae Youn Hwang.

Education

Korea University (Advisor: Prof. Gyeong-Moon Park)

Ph.D. in Artificial Intelligence

Seoul, South Korea

Mar. 2026 - present

DGIST (Advisor: Prof. Jae Youn Hwang)

M.S. in Electrical Engineering and Computer Science

Daegu, South Korea

Mar. 2019 - Aug. 2022

DGIST (Daegu Gyeongbuk Institute of Science and Technology)

B.E. in School of Undergraduate Studies

Daegu, South Korea

Mar. 2014 - Feb. 2019

Experience

Klleon AI Research

AI Researcher

Seoul, South Korea

Aug. 2022 - Feb. 2026

- Accelerated inference using a training-free diffusion sampler (4.11×).
- Developed audio-driven 3DMM generation for virtual avatars with natural human-like expressions and movements. (LVE 27.5%, FDD 28.9%, MEE 27.1%, CE 24.1%, Diversity 17.7%)
- Developed a photorealistic head rendering model using Gaussian Splatting, outperforming 5 state-of-the-art models. (MSE 59.96%, PSNR 4.41dB, SSIM 3.85%, LPIPS 38.16%)
- Developed a Head Swap AI model with 212.7x speedup, reducing annual GPU costs by 99.53% (from \$2.2M to \$10.5K).
- Built large-scale multimodal data pipelines (9.41M+ frames from in-the-wild videos).
- Integrated external APIs (NVIDIA Omniverse Audio2Face, OpenAI ChatGPT, TTS) into a streaming avatar system, achieving 25-28 FPS performance.

LANTERN

Co-founder

Daegu, South Korea

Nov. 2016 - Jul. 2017

- Founded a data-driven personalized tutor matching service company in collaboration with Class101.
- Designed a matching database system and established tutor evaluation metrics for personalized recommendations.

Awards & Scholarships

Presidential Science Scholarship for Graduate Students (3rd Cohort) Ministry of Science and ICT	<i>South Korea</i> Mar. 2026 – Present
Outstanding Poster Award 2021 Student Conference at DGIST	<i>Daegu, South Korea</i> 2021
Best Paper Award 2021 Spring Conference at KOSOMBE	<i>Remote, South Korea</i> 2021
Best Project Award 2016 Undergraduate Group Research Project (UGRP) Program at DGIST	<i>Daegu, South Korea</i> 2017
Full Government Scholarships Full tuition exemptions and school expenses support	<i>Daegu, South Korea</i> 2014-2022

Skills

Programming	Python, Bash, MATLAB, C, Java
Frameworks	PyTorch, TensorFlow, Keras, Scikit-learn, Pytorch3D
Tools	Docker, Containerd, Git, Node.js, HTML, CSS, JavaScript
Languages	Korean, English
